

INVESTOR PITCH · 2026

Justra AI

AI-Verified. Blockchain-Enforced. Dispute-Free Freelancing.

The escrow platform built for GitHub-based freelance development that eliminates payment disputes at their root.

01 THE PROBLEM

“ For generations, every business relationship rests on a simple **social contract**.

DELIVER VALUE

The provider does the work, on time and to spec.

RECEIVE PAYMENT

The client pays the agreed amount, in full, on time.

But has it ever been *that simple?*

02 THE REALITY

Many Moving parts, Many backs and forths, *Many opportunities for things to go wrong*

03 THE FREELANCE ECONOMY IS BROKEN

Three structural failures **every developer knows**.

Vague Requirements

Clients shift goalposts after delivery. Ambiguity isn't a bug — it's exploited as a feature.

Non-Payment Risk

53%

of freelancers report non-payment issues. Developers won't start without guarantees.

Broken Arbitration

Upwork's human review takes days, is client-biased, and charges up to 20% in combined fees.

*No platform today combines **objective deliverable verification + escrow + code analysis** in a single workflow.*

04 OUR SOLUTION

Four pillars that **eliminate disputes by design.**

Machine-Readable Requirements

01

All requirements defined upfront as structured checklists, test cases, and acceptance criteria. No more ambiguity, no more interpretation games.

Trustless Fund Escrow

02

Client funds are locked in a Solana smart contract. Neither party can withdraw unilaterally — release is rule-based and transparent.

Milestone-Based Payments

03

Work splits into clearly defined milestones, each tied to acceptance criteria. Progress is visible, payment is conditional.

AI Deliverable Evaluation

04

Submitted work is auto-analyzed against requirements and scored for completeness, correctness, and alignment. Fast, objective, fair.

05 THE THREE PILLARS, VISUALIZED

OUR SOLUTION

Three interdependent pillars that eliminate payment disputes at their root.

01

Trustless Payments (Smart Contract Escrow)

Funds locked in a Solana smart contract. Released only on verified milestone completion — no platform can touch it.

02

AI Milestone Verification (5 Independent AI Models)

Claude, GPT, Gemini, Grok & DeepSeek simultaneously evaluate code against pre-agreed specs. Aggregate verdict is instant and unbiased.

03

Human Arbitration (Last Resort Safety Net)

If the AI verdict is disputed, a qualified arbitrator reviews the full AI report as structured evidence — fast and fair.

If both parties accept the AI verdict →
Smart contract executes **immediately.**

Zero delay.
Zero intermediary.

06 HOW IT WORKS — END-TO-END FLOW

07 MARKET OPPORTUNITY

A massive market with a **real, paid-for problem**.

\$1.5T

09 COMPETITIVE LANDSCAPE

Why **Justra** Wins

The only platform that combines secure payments, code-native verification and AI-powered decisions.

 Justra	 Upwork / Fiverr	 Escrow.com	 SmarTrust	 CodeRabbit
 Escrow 	 Escrow 	 Escrow 	 Escrow 	 Escrow 
 Code Analysis 	 Code Analysis 	 Code Analysis 	 Code Analysis 	 Code Analysis 
 GitHub Native 	 GitHub Native 	 GitHub Native 	 GitHub Native 	 GitHub Native 
 AI Verdict 	 AI Verdict 	 AI Verdict 	 AI Verdict 	 AI Verdict 
 Fee 3-5%	 Fee 10-20%	 Fee Variable	 Fee Low	 Fee Subscription

No existing platform combines **trustless payments** + **code-native verification** + **AI-driven decisions**.

10 BUSINESS MODEL

BUSINESS MODEL

Three Revenue Streams. One Scalable Marketplace.

Platform Fee

3–5%

Deducted per transaction
at payment release.
Scales with volume.

Positioned as a fraction of
Upwork's 20%.

Subscription Tiers

Recurring

Free tier covers core features.
Paid tiers unlock priority
arbitration, security audits,
quality assurance testing,
and advanced analytics.

Per-Review Fee

Pay-as-you-go

Flat fee for additional
AI reviews post-revision
or if contested.

Deducted from escrow
seamlessly.

Platform fee dominates early revenue. **Subscription** becomes primary
as the premium feature set matures.

11 RISKS & MITIGATIONS

We've identified the top risks — and **designed for each.**

AI Scoring Inaccuracy

→ 5-model aggregation reduces single-model error. Structured scoring breakdown plus human arbitration as backstop.

Assessment Gaming

→ Randomised test injection, behavioural code analysis, sandboxed code execution, and arbitration layer.

Code Confidentiality

→ Transient processing — code not stored post-review. Enterprise on-premise options. Full API disclosure at onboarding.

Regulatory Complexity

→ Pre-launch legal review per jurisdiction. Partnering with regulated payment infrastructure providers.

Cold Start Problem

→ Seed developer communities first (GitHub, Solana forums). Zero fees plus free reviews for early cohorts.

12 PRODUCT ROADMAP

From MVP to platform — a clear three-phase path.

PHASE 01

v1.0

- GitHub repo + ZIP delivery
- Solana smart contract escrow
- 5-model AI verdict engine
- Spec verification assistant
- Human arbitration fallback

PHASE 02

v2.0

- Fiat payments (Stripe, PayPal)
- IDE extension (VS Code)
- Automated test execution
- Mobile app
- Enhanced security audits

PHASE 03

v3.0

- Design + non-code deliverables
- Enterprise / agency tier
- White-label platform
- Expanded global compliance

13 GO-TO-MARKET STRATEGY

GO-TO-MARKET STRATEGY

Four Tactical Levers. One Clear Path to Scale.

01 Developer-First Acquisition

Seed GitHub communities, dev forums, and Solana ecosystem channels. The payment-protection narrative resonates most strongly here.

02 Zero-Fee Early Access

Offer zero platform fees and free reviews for the first cohort. Subsidise early adoption to bootstrap both sides of the marketplace.

03 Freelance Community Presence

Active engagement on Upwork forums, Reddit, and Pakistan/regional tech communities (Islamabad launch base).

04 Known Project Seeding

Partner with open-source maintainers and early-stage startups to demonstrate real-world verdicts publicly.

Focus: Seed developer side first. **Supply unlocks demand.**

14 WHY NOW?

01

LLMs Are Code-Proficient

Every leading AI model can read and write software code accurately — making **objective code evaluation tractable** for the first time.

02

Smart Contracts Are Mature

Solana's speed and low fees make **blockchain escrow practical** for everyday freelance transactions, not just high-value deals.

03

Market Is Actively Broken

53% non-payment rates and **20% platform fees** mean users are actively seeking alternatives today.

04

No Unified Solution Exists

Code analysis, escrow, and GitHub integration exist separately. The window to be **first to unify** them is open — not for long.

The convergence of a **broken status quo**, **mature AI**, and **live blockchain infrastructure** makes this a timely and defensible opportunity.

MEET THE TEAM

Engineers. Builders. Problem solvers.

United by a mission to make freelance payments **fair**, **secure**, and **code-native**.

Danial Ansari

CEO & Founder

Vision • Product Strategy • Growth

Product-minded builder with a passion for solving real-world problems through secure, scalable, and user-centric platforms.

@danialansari-dev
